

## TIPS FOR MATHEMATICS PAPER CLASS XII

- 1) Plan your questions in the provided reading time and answer those questions first which you are supremely confident of.
- 2) Although you can attempt your question paper in any order, but I suggest attempting section A (atleast) at one go.
- 3) Attempt difficult questions in the middle as stress level is comparatively low during that period.
- 4) Be thorough with the NCERT and CBSE sample papers
- 5) Prepare chapters like **RELATIONS AND FUNCTIONS, DETERMINANTS, VECTOR, 3 DIMENSIONAL GEOMETRY, INTEGRATION** from the previous year papers after completing NCERT
- 6) Make sure you are leaving adequate space between two questions. Always try to attempt new question from fresh page.
- 7) Draw appropriate margins on both sides of the answer sheets.
- 8) I would suggest that you must start the questions of **section-C** from the left side sheet so that the rollover of sheet during the question may be avoided.
- 9) Highlight your answers.
- 10) Avoid overwriting
- 11) Try to finish your paper in 2 hr 40 min so that you have enough time to have a relook at your paper.
- 12) Last but surely not the least, **BE CONFIDENT**.
